Hi,

My name is Prince V Joy. Iam a  Data Scientist student in Edayoda Digital University.

I completed Diploma in Computer Engneering .

After completing Diploma I wondered what should I do next. Obviously my answer is B.tech.

Every body goes for it like a another step in their professional carrier. I also went for it but,

I can directly apply for 3$^{rd}$ semester via Lateral Entrance. At this point things are going well.

Last week of my college days Corona Outbreaks happened and everything is going out of my

Plate not only for me ,like for everybody else. So Lateral entry  got cancelled . Selection Is criteria Become our Diploma marks .I only got 71 percentage. Clearly I couldn't got in. So I become Helpless with no idea whats going  to be next in my life.At that time I saw Edayoda Data Science ad on Instagram. Its really not my jam but I always wondered how big fortune companies likeFacebook, Instagram are Sorting, Procesing and Organizing data. Its like every like, comment,Sharing,Tagging all those little things can create upto several petabytes of data only in facebook Daily .We are only talking about facebook , if we take global data created in 2020 is about 44 zettabytes of data. What! It only goes up by year after year.So  I found a opportunity in it and I decided to take it.Its like a brave step for my future. Iam struggling a lot ,but I will sort things Out before the middle of October.I hope so.Iam positive about this.

So that's how I find this course.Great mentorship and please give some light on this.

Thank you.
